## **AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1-9. (canceled).

10. (currently amended) Ultralow carbon cold-rolled annealed steel sheet excellent in surface conditions, formability and workability comprised of, by mass%, 0.0003%≤C≤0.003%, Si≤0.01%, Mn≤0.1%, P≤0.02%, 0.005%≤S≤0.01%, 0.0005%≤N≤0.0025%, 0.001%≤acid soluble Al≤0.003%, 0.015%≤acid soluble Ti≤0.07%, including La, Ce, and Nd, and 0.002%≤La+Ce+Nd≤0.02%, and a balance of Fe and unavoidable impurities,

said ultralow carbon cold-rolled annealed steel sheet characterized by containing complex oxides of at least La oxides, Ce oxides and Nd oxides with Ti oxides and at least cerium oxysulfite, lanthanum oxysulfite, and neodymium oxysulfite as oxysulfite to fix the solute S, wherein the diameter of the complex oxides is several µm or more, with observed inclusions in a cross-section perpendicular to the rolling direction examined by a secondary electron image of a scan type electron microscope, and with the composition of about 50 randomly selected inclusions analyzed, and further containing Ti<sub>4</sub>C<sub>2</sub>S<sub>2</sub> with a diameter of several 100 nm, wherein the Ti<sub>4</sub>C<sub>2</sub>S<sub>2</sub> prevents the precipitation of fine TiS and fine carbides each with a diameter of several 10 nm, wherein the cold-rolled annealed steel sheet has a recrystallized grain diameter of 15µm or more, r-value of 2.0 or more and total elongation of 50% or more after one step cold rolling and one step annealing at a temperature of 600 to 780 °C.

11. (currently amended) Ultralow carbon cold-rolled annealed steel sheet excellent in surface conditions, formability and workability according to claim 10, wherein the cold-rolled <u>annealed</u> steel sheet contains no added B.

12. (canceled).
